Civil Engineering Technicians
make a difference every day.

At A-B Tech, our Civil Engineering Technology curriculum trains future technicians to help make our community a better place. Civil Engineering Technicians ensure clean rivers and streams, design efficient and sustainable buildings (often retrofitting old ones), improve safety on roads to help reduce accidents, develop mass transit alternatives, ensure safe drinking water, preserve natural ecosystems for wildlife, and design infrastructure that saves lives.

Geomatic Technicians
make a difference every day.

The Geomatics (Surveying) Technology curriculum trains future technicians to serve our community while working with local professionals. Geomatics Technicians enjoy the outdoors while helping select the best location for new projects and preserving unspoiled areas for conservation. Graduates work with planners to reduce flooding and restore areas impacted by storm damage. They also assist new homebuyers to ensure a smooth transaction.

Network Technicians
make a difference every day.

At A-B Tech, the Network Management curriculum trains future technicians to help make our community a better place. How frustrating is it when you can't get on the Internet? Companies rely on computer networks every minute of every day. Every business needs support to keep its networks running smoothly. Being a skilled computer network support specialist can make you valuable in the job market across many industries. When you are skilled at trouble-shooting and fixing networking problems, you can be a "hero" who can come to the rescue when people need you.

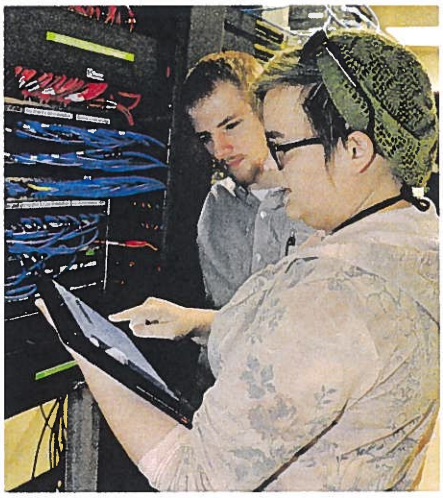
Did you know . . .

Systems Security Technicians make a difference every day.



At A-B Tech, the Systems Security curriculum trains future technicians to help keep our community safe and our information protected. Security breaches happen every day. Security professionals play an essential role in protecting an employer's reputation by guarding against breaches, securing information, and restoring operations following disasters. As a graduate, you will understand operations, adapt your skills to emerging threats, and learn new technologies to meet company needs. Team members must understand their individual responsibilities while additionally being able to contribute positively to accomplishing larger team goals.
